Group Project Briefing

Three working stages
Design evidence and submission requirements

Due Sunday, 15 November 2026, 11:59 PM (SGT)

Three stages, three sets of requirements

Stage	Your development assumption
Stage 1	Only Stage 1 requirements are known.
Stage 2	Stage 2 has just arrived. Stage 3 is unknown.
Stage 3	Stage 3 has just arrived. Extend Stage 2.

Although you can read all stages, work as if new requirements arrive later.

A complete version at each stage

Stage 1 Build and test a complete baseline game.

Stage 2 Extend the saved Stage 1 version.

Stage 3 Extend the saved Stage 2 version.

General support for future extensions is allowed.
Keep later-stage features for their own stages.

Save runnable commits as stage-1, stage-2 and stage-3.

Evidence of a small, justified change

For each transition	Evidence to include
What did you add?	New classes and their responsibilities.
What did you modify?	Existing classes changed, with reasons.
What still works?	Checks that earlier behavior remains correct.

Compare stage-1 with stage-2, then stage-2 with stage-3.

Explain the effect on the design. Line count alone is insufficient.

UML diagrams to submit

Diagram	Required submission
Class diagram	Stage 1, Stage 2 and Stage 3 (one diagram per stage).
Sequence diagram	One complex use case from Stage 2 OR Stage 3.

3 class diagrams + 1 sequence diagram

Each diagram must match the code of the stage it describes.

A sequence diagram that shows understanding

Your use case	State its stage, starting conditions and outcome.
Object interaction	Show who calls whom and what each object does.
Decisions	Include relevant guards, alternatives or loops.

Explain how the interactions implement your use case.

AI use and your communication history

You may use AI. You must understand and verify the work you submit.

What to upload All project-related prompts, AI replies and follow-up exchanges.

Where to upload Your own branch in the group GitHub repository.

Keep the full conversation in order. A summary alone is insufficient.

GitHub evidence for the group and each member

Group evidence Runnable stage tags and comparisons between stages.

Individual evidence Each member’s AI chats in their own branch.

Example folder on your personal branch

ai-history/stage-1/chat-01.md
ai-history/stage-2/chat-01.md
ai-history/stage-3/chat-01.md

README: link to every stage and every member’s AI history.

One group report with individual reflections

Group report

Explain the design and its evolution.
Include stage diagrams, change evidence and results.

Reflection chapter

Each member writes a separate section under their own name.
Describe your own contribution and learning.

Your individual reflection

What did you learn?	Describe a specific gain in knowledge or skill.
How did you apply it?	Connect course concepts to a real project decision.
What challenged you?	Explain the hardest part and why it was difficult.
How did you solve it?	Describe your attempts, solution and what you learned.

Support your reflection with examples from your own work.

A 15-minute recorded presentation

Suggested time	Content
2 minutes	Game overview and the three stages.
4 minutes	Gameplay demonstration and key outcomes.
4 minutes	Class diagrams and evidence of stage changes.
3 minutes	Selected use case and sequence diagram.
2 minutes	Individual contributions and key learning.

Each member explains part of the work. Include timestamps in README.

Submission deadline and checklist

Sunday, 15 November 2026

Week 13 Sunday, 11:59 PM Singapore time

Runnable code for all 3 stages
3 class diagrams
1 Stage 2 or Stage 3 sequence diagram

Group report with individual reflections
15-minute presentation video
GitHub links, full AI histories and declarations

One submission per group. Check that all links are accessible.
